

Jari Activ Stool

Vestibular input (“movement”)

Balance & Coordination

Self-Regulation

Ages: 6+

Features:

Activities: 'Move to Learn' with the Activ Stool - the clever design allows movement for children while they stay seated. Children can self-regulate by moving as much as they need to so that they can maintain their attention. Movement stimulates a nice, upright sitting posture which also stimulates attention and arousal.

Who needs and benefit from Tactile Stimulation:

FOR ALL KIDS who:

- have difficulty sitting for short or long periods of time;
- who get distracted easily;
- who have trouble concentrating
- who like to move while they learn

It is impossible to actually sit still on a Jari Activstool, no lying back, and definitely no slouching. With a rotating convex base and a swiveling seat, Jari forms one leg of a stable tripod, your own legs provide the other two parts. That means you are constantly flexing, adjusting and moving; the ideal way to stay focussed and concentrate.

But the coolest thing about Jari Activstool is that it is gas height adjustable. The stool grows with you! This also means it fits a huge range of students and just about any application:

- Classrooms
- Libraries
- Study groups
- Open spaces
- Collaborative learning
- Behind a desk or on its own

No longer do you need various sizes of stools to suit the range of your student population, Jari Activstool adjusts to suit almost everyone in a senior school environment, right up to adult size.

The height range is 400-500mm so also suitable for upper primary.
